EDUCATION

University of Toronto, St. George Campus

Toronto, ON

Honours Bachelor of Science – Computer Science Specialist

Sept 2025 – May 2029

- **Planned Focuses:** Artificial Intelligence; Web and Internet Technologies
- **Relevant Coursework:** CSC110, CSC111, CSC240 (Enriched Intro to Theory of Computation), MAT157 (Analysis I – Specialist), MAT223

AWARDS & ACHIEVEMENTS

USACO Silver Division | Competitive Programming

Jan 2024

- Solved algorithmic problems involving binary search, greedy algorithms, prefix sums, two pointers, and graph traversal (BFS/DFS) under time constraints using C++

LeetCode Rating: 1850 | Top ~5% Globally

Current

- Solved 104+ problems; actively participating in weekly contests and daily challenges

EXPERIENCE

Huaxin Technology Training School

Chengdu, China

Teaching Assistant

Mar 2023 – Mar 2024

- **Assisted** primary school students (Grades 5-6) in **learning programming fundamentals**
- **Helped** students **debug code** and develop problem-solving skills
- **Led** sessions introducing **emerging technology concepts**, including ChatGPT and its applications

TECHNICAL SKILLS

Languages: Python, C++

Core Strengths: Algorithm Design, Data Structures, Competitive Programming, OOP

Web Development: Flask, Web Scraping (BeautifulSoup)

Databases: MySQL, SQLAlchemy ORM

GUI Development: Tkinter

Tools & Platforms: VS Code

SELF-DEVELOPED PROJECTS

Flashcard Learning App | *Python, Tkinter, SQLAlchemy, MySQL*

Sep 2024 – Mar 2025

- Developed a desktop application for vocabulary learning with a **Tkinter GUI**
- Implemented **XML parsing** to import words from YouDao Dictionary exports
- Designed database schema using **SQLAlchemy ORM** with **MySQL** for persistent storage
- Built features for grouping words and reviewing them as flashcards

Weather Lookup App | *Python, Flask, BeautifulSoup, MySQL*

Jul 2025

- Built a web application to **search historical weather data** for any city and date
- Implemented **web scraping** using BeautifulSoup to extract data from external weather source
- Designed a **MySQL caching layer** to store scraped data for faster subsequent queries
